

Foster Brothers Farm is a 5th generation dairy farm located in the picturesque Champlain Valley, west of the Green Mountains, in Middlebury, Vermont. The Fosters have played a significant role in the Northeastern dairy industry and they are known for their innovation in farming. Sound dairy practices, ingenuity, and good stewardship of their farm resources are incorporated throughout their operation.

The Fosters' community as well as environmental concerns led them to build an anaerobic digester in 1982, which captured methane gas that powered the farm's generator. The digestion process produced a solid material that was nearly odorless and absent of volatile nitrogen compounds. This material, when composted, yields a peat-like substance. However, unlike peat moss, the digested manure is a renewable resource.

The Fosters continued to innovate by composting these solids, among other materials, starting in 1989. Their research and development resulted in the establishment of Vermont Natural Ag Products, Inc., a regional potting soil and soil amendment company, committed to producing quality materials for the plant industry. Each of their products have been scientifically blended and tested to provide you with "Nothing but the Best." The Fosters continue to research new applications and methods for composting and ways to utilize precious agricultural resources.

more.

Top Soil

This high quality blend of compost, sand, and sphagnum peat moss is manufactured, not stripped. Use this product when seeding lawns, topdressing, replacing, or amending existing and poor soils. Available in 1 cf bags.

Composted Cow Manure

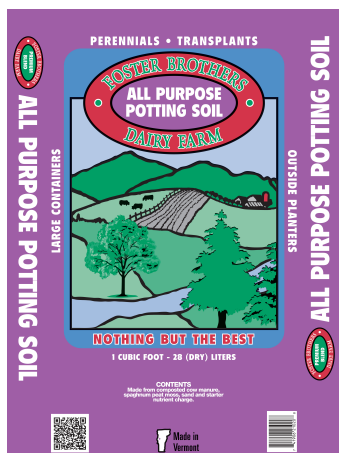

Composted Cow Manure that yields a 1-1-1 analysis. Use this product to add organic matter to the soil, increase soil fertility, or to control erosion. Available in 1 cf bags.

Dehydrated Composted Cow Manure

This product blends dehydrated composted cow manure and sand. It yields a 2-1-2 analysis. Utilize this composted product as a fertilizer in vegetable and flower gardens, as a topdress for lawns, or mulch under trees. Available in 1 cf bags.

Foster Brothers Dairy Farm • Nothing but the Best!

All Purpose Potting Soil

Compost, peat moss, sand, and perlite are blended to produce this high quality outdoor container mix. Great when used in window boxes, planters, or garden beds. Available in 1 cf and 20 lb bags.

Regular fertilization depending on plant needs is critical for healthy, lush growth.

Our products earned the Commissioner's Choice Vermont Seal of Quality while this award existed. It acknowledged Vermont farm products that were essentially 100% produced and processed in the state of Vermont, a claim which we continue to meet.
